

EUROAD REFINES ALL STANDARD FUELS *into high performance fuels*

SIMPLE AND *ingenious*

EuroAd is a vegetable combustion improver that delivers more energy at the same time as it reduces emissions and have a positive impact on maintenance. It can be added to both liquid fossil fuel and biofuel, and works with combustion engines and burners. The results are always the same: high performance fuels which leads to reduced fuel consumption, lower emissions and less maintenance required. And thus, of course, saved costs.

EXTRACT MORE *energy*

Regular use of EuroAd reduces fuel consumption by an average of 4-10 percent depending on basefuel, type and age of vehicle/heating equipment, exhaust aftertreatment system, and maintenance. The economic benefits – through reduced maintenance, allowances and longer service life – are clearly in line with, or greater than, the reduced consumption.

The explanation is simple. EuroAd makes the fuel more atomised which results in a more efficient and complete combustion. The result is increased energy output from the fuel.

A *safe* PRODUCT

EuroAd is 100 percent vegetable. Biodegradable and non-toxic. It has been carefully tested and well documented. Thanks to independent studies, we know that EuroAd works exactly the way we promise and that it will not damage engines, fuel systems or other parts in either the short or the long term.

reduced EMISSIONS

Reducing harmful exhaust emissions means a cleaner world and a healthier environment for humans. It's that simple. EuroAd reduces some harmful exhaust emissions by 50-75 percent on average. It also ensures more complete combustion, allowing us to extract more energy from the fuel and forming fewer residual products, which greatly reduces harmful exhaust emissions.

Due to the fact that just one litre of EuroAd treats as much as 32,000 litres of fuel, our product also generates relatively low emissions during transport from the factory. It also takes up little storage space at your site.

why EUROAD

With EuroAd a unique and innovative high performance fuel, for environmental cleanup, will be created. It helps to achieve or exceed environmental requirements and international agreements. EuroAd also provides a foundation for sustainable development that gives rise to confidence in the future, for generations to come.

WHAT'S *unique?*

- **SIMPLE AND INGENIOUS**

Creates high performance fuels and works for both liquid fossil fuel and biofuel.

- **EXTRACT MORE ENERGY**

20 percent faster and more complete combustion leads to reduced fuel consumption, on average, 4-10 percent.

- **A SAFE PRODUCT**

Well tested, 100 percent vegetable. Biodegradable and non-toxic.

- **REDUCED EMISSIONS**

More complete combustion leads to, on average 50-75 percent, reduced residual products.

- **LESS MAINTENANCE**

The cleaning effect on combustion components, valves and exhaust systems, results in longer engine service life.
